

## Axentunnel Flüelen / Canton of Uri / Switzerland

### Ballast bonding

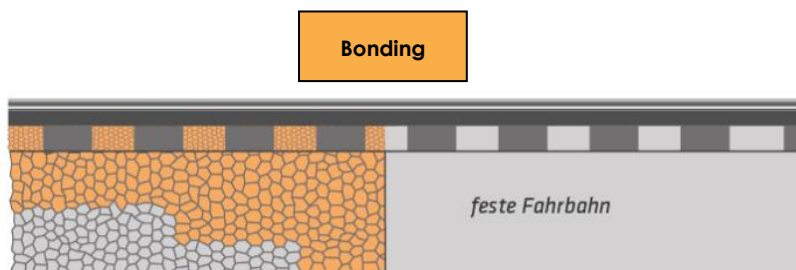

View on the ballast bonding

### Project description

As part of the Axentunnel project, various renovation works and track renewals were carried out. A fixed track was also installed.

In order to maintain safety and driving comfort, as well as to protect the rolling stock, the transitions from the ballast tank to the track were bonded over the entire surface and in a staggered manner.

### Contracting authority

Rhomberg Bahntechnik AG  
Würzgrabenstrasse 5  
CH-8048 Zürich  
Mr. Cheli

### Application date

September 2018, November 2019

### Key elements of the project:

Number of passages  
6  
Application length  
6 x 13.20 m  
Application width  
4.65 m  
Application depth  
Ø 55 cm  
Total quantity applied  
3090 litres
