45 cm - 80 cm
Total quantity applied
3080 Litres
Working hours
8 hours

Project description

As part of the project in Meyrin, various rehabilitation works were carried out in 2 stages.

In order to renovate one track, a ballast bonding was realized on the neighbouring track.

The secondary track could thus remain in operation on the very busy line and the other track could be safely renovated.

In the second stage, the same was done for the secondary track.
