1252 m¹
Width of the application
30 cm
Depth of the application
65cm - 75 cm
Total quantity applied
4240 Litres
Working hours
7 hours

Project description

As part of the project between Andelfingen and Marthalen, various renovation works were carried out.

In order to renew the external drainage, a trench had to be built along the track. In order to keep the track and ballast in place, ballast bonding was performed.

This allowed the track to remain in service on the busy line during the construction period.
