Ballast bonding

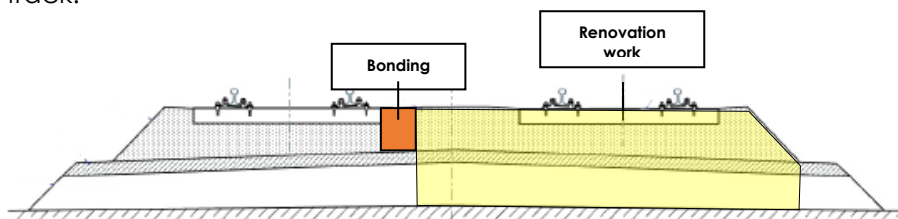

View on the uncovered ballast bonding

Project description

As part of the project in Effingen, various renovation works were carried out in 2 stages. In order to renovate one track, a ballast bonding was realized at the neighbouring tracks.

This allowed the secondary track to remain in operation on one of the busiest and most heavily trafficked lines in Switzerland and the other track to be safely renovated.

In the second stage, the same was done on the secondary track.

Contracting authority

Swiss Federal Railways
Poststrasse 5
3000 Bern 65
Mr. Michael Meyer

Application date

March 2021

Key elements of the project:

Length of the application
516 m¹
